RACKS WITH STACKER PILLARS

This is our flagship product

The stacker pillars are equipment installed on specific metal racks suitable for loading and unloading the parts through robot.

The investments in research and development in this field are very strong in our company and this is demonstrated by the fact that all our concepts, prototypes and relative productions are patented worldwide.

ALL STARTS IN OUR TECHNICAL DEPARTMENT

With more than 10 designers in Italy and abroad with deep expertise in the Automotive sector, we are able to satisfy the most complex needs and to put forward innovative solutions.

We are engaged from simultaneous engineering to participation in the complete product development as resident engineers by the global car manufacturers at their premises.

RESEARCH AND DEVELOPMENT

Thanks to the great experience and know-how gained over the past years, our technical department in cooperation with the project managers and the prototype team is able to study and develop new solutions to fulfil the special requirements of our customers.
